

FACULTY

Cynthia J. Cress, PhD, CCC-SLP, is an associate professor at University of Nebraska–Lincoln, specializing in language, AAC, and early intervention. She has provided workshops all over the country and internationally, helping professionals provide communication services to some of the more puzzling children on our caseloads—children with complex communication needs and/or autism spectrum disorder, and infants and toddlers with multiple impairments. She researches patterns of communication in infants/toddlers with complex communication needs and has provided clinical services for children and adults who rely on AAC for nearly 30 years. Her latest research is to develop new communication assessment tools to screen and assess basic communication in preintentional communicators of all ages (children and adults). She brings a wealth of clinical as well as theoretical experience to her workshops about services for basic communicators.
