Aural Rehabilitation: Achieving Functional Outcomes

INTRODUCTION

There has been a renewed interest in the provision of aural rehabilitation (AR) services as part of patient-centered hearing health care. Aural rehabilitation is a holistic approach to the management of hearing loss that may include patient education, fitting of devices, and auditory training exercises. Although audiologists may recognize the benefits of comprehensive AR, questions may remain about how to measure functional outcomes of these services. This course reviews functional outcome assessments for aural rehabilitation and how to incorporate these measures into everyday practice to enhance patient success.

LEARNING OUTCOMES

You will be able to:

• List barriers to outcome assessment
• Discuss the benefits of assessing functional outcomes in AR
• Outline how to incorporate outcome assessment in daily practice

PROGRAM HISTORY and IMPORTANT INFORMATION

Recording length: 44 minutes
Recording date: December 5, 2021
End date: December 30, 2026

To earn continuing education credit, you must complete the learning assessment on or before December 30, 2026.

ASHA CE Provider approval does not imply endorsement of course content, specific products, or clinical procedures.

This course is offered for 0.05 ASHA CEUs (Intermediate level, Professional area).
