FACULTY

Deborah Moncrieff, PhD, CCC-A, focuses on auditory processing disorder (APD) across the life span, with particular emphasis on the negative impact of APD on communication, learning, language, and reading. She studies the prevalence of APD, its links with learning disabilities, and the underlying neural mechanisms of APD with electrophysiologic and fMRI methods. She has developed a treatment program for individuals identified with amblyaudia, a binaural integration type of APD.

Financial Disclosures:
- Assistant professor at the University of Pittsburgh
- Grant funding from U.S. Department of Education
- Owner and president of AUDIA Dichotics
- Financial compensation from ASHA for this presentation

Nonfinancial Disclosures:
- No nonfinancial relationships to the content of this presentation

Andrew J. Vermiglio, AuD, CCC-A, is an assistant professor and director of the speech perception lab at East Carolina University. He has served on the faculty of Cal State Northridge and as a senior research associate at the House Ear Institute in Los Angeles. His research is in the area of speech recognition in noise and the CAPD construct. Prior to entering the field of audiology, he worked as a professional musician in Los Angeles and as a member of the armed forces serving in the U.S. Navy and U.S. Army Reserves.
