FACULTY

Adrienne B. Hancock, PhD, CCC-SLP, is an associate professor at The George Washington University, with expertise in transgender voice and communication. Her clinical experience and perspective informs the broad scope of her research related to transgender communication: unique physiological characteristics of trans women, voice and language cues to gender attributions by listeners, psychosocial impact of voice function and needs, and treatment effectiveness. Hancock has published several peer reviewed research articles and given invited presentations on clinical applications of gender diversity in communication at the ASHA Convention, Voice Symposium, and the American Association for Advancement of Science. Hancock’s work is frequently cited in the research literature, including the WPATH Standards of Care for transgender and gender non-conforming populations.

Linda Siegfriedt, MEd, CCC-SLP, is a clinical professor at The George Washington University, directing the graduate Clinical Transgender Voice and Voice Disorders Program. She uses a variety of service delivery models for trans women, including vocal intensive training; introductory and carryover group training; and traditional private, weekly voice training. She has been a voice specialist in medical, clinical, and academic settings for 25 years. She has provided education and training to fellow speech-language pathologists at the District of Columbia Speech and Hearing Annual Conference, the American Speech-Language-Hearing Association Convention, and the International Foundation for Gender Education on the subject of voice and communication training for the transgender community.
