Speech, Language, Cognitive, and Swallowing Rehabilitation in Patients With Brain Tumors

INTRODUCTION

Neurocognitive and communication rehabilitation in patients with brain tumors is different than recovery after stroke or traumatic brain injury. This session describes basic characteristics of various types of brain tumors, current treatment options, associated sequelae, and expected prognosis. Diagnostic and rehabilitation considerations are reviewed as they relate to speech, language, cognition, and swallowing to help inform the most effective SLP treatment plan.

This course is a recorded session from the 2019 online conference “Cancer Care: Enhancing Communication, Swallowing, and Quality of Life.”

LEARNING OUTCOMES

You will be able to:

- describe types of brain tumors and current treatment options
- identify diagnostic and rehabilitative considerations for speech-language, cognitive-linguistic, and swallowing disorders in patients with brain tumors

PROGRAM HISTORY and IMPORTANT INFORMATION

Recording length: 80 minutes
Online conference dates: March 20–April 1, 2019; August 7–19, 2019
End date: March 20, 2024

To earn continuing education credit, you must complete the learning assessment on or before March 20, 2024.

This course is offered for 0.1 ASHA CEUs (Intermediate level, Professional area).
