Best Practices for Assessment & Treatment of Speech Development in Early Intervention

INTRODUCTION

This webinar will explore the nature and typical development of speech sound production in children under age 3 with and without language delays or disorders. The speakers will discuss best practices for assessment of speech abilities in young children as well as family-centered strategies to facilitate speech sound development within everyday activities and routines in early intervention.

LEARNING OUTCOMES

You will be able to:

- define and describe expectations for typical speech sound development in the birth-to-3 population
- describe appropriate assessment strategies and differential diagnosis of speech sound development in early intervention practice for children under age 3
- model strategies that facilitate speech sound development within everyday activities and routines through the use of parent coaching techniques with children under age 3
