Meniere’s Disease in Childhood: A Case Study

INTRODUCTION

Meniere’s disease (MD) rarely occurs in children. Due to this, care and treatment by knowledgeable clinicians and physicians are lacking. This presentation reviews a case of a 10-year-old male with diagnosed MD, the interdisciplinary approach for care and treatment, the cross-facility approach for obtaining best results, and follow-up hearing aid fitting suggestions for the affected ear.

This course was presented and recorded at the 2019 ASHA Convention.

LEARNING OUTCOMES

You will be able to:

- identify signs and symptoms of Meniere’s disease
- summarize the results and recommendations for treatment following vestibular testing for children with MD
- discuss the need for pediatric vestibular education across professions, including audiologists, physical therapists, otolaryngologists, pediatricians, and teachers

PROGRAM HISTORY and IMPORTANT INFORMATION

Recording length: 60 minutes
ASHA Convention session date (session #1610): November 22, 2019
End date: November 22, 2024

To earn continuing education credit, you must complete the learning assessment on or before November 22, 2024.

This course is offered for 0.1 ASHA CEUs (Intermediate level, Professional area).
