Getting Started in Teleaudiology

INTRODUCTION

As states, payers, patients, and clients consider telepractice as an alternative service delivery model, many audiologists are struggling to adapt their in-person practices to teleaudiology and are overwhelmed by quickly evolving coding and payment laws and regulations. This course provides practical information to help audiologists assess their own readiness for telehealth – as well as client and patient readiness – and develop a plan to implement this service delivery model. The presenters also discuss coding, payment, and compliance considerations and provide resources to help audiologists navigate changing regulations and ensure coding and payment compliance.

LEARNING OUTCOMES

You will be able to:

- assess your teleaudiology needs and readiness
- develop a plan to implement a telehealth service delivery model
- discuss key coding and compliance concepts
- identify resources to research state and payer regulations and polices related to teleaudiology

PROGRAM HISTORY and IMPORTANT INFORMATION

Original program recording date: April 30, 2020
Start date: May 14, 2020
End date: April 30, 2025

To earn continuing education credit, you must complete and submit the learning assessment on or before April 29, 2025.

This course is offered for 0.1 ASHA CEUs (Introductory level, Related area).
