Detecting, Treating, and Preventing Delirium in the Intensive Care Unit

INTRODUCTION

This course discusses delirium, an underrecognized syndrome associated with increased morbidity and mortality, particularly in patients in the intensive care unit (ICU). The speaker will explain how to recognize the signs of delirium and present strategies for treatment and prevention to improve patient outcomes.

LEARNING OUTCOMES

You will be able to:

- list three reasons for identifying and preventing delirium
- explain three interventions for treating and preventing delirium
- apply delirium screening techniques when working with verbal and nonverbal adults

PROGRAM HISTORY and IMPORTANT INFORMATION

Original program recording date: June 24, 2020
End date: June 24, 2025

To earn continuing education credit, you must complete and submit the learning assessment on or before June 24, 2025.

This course is offered for 0.1 ASHA CEUs (Intermediate level, Professional area).
