Structural Anomalies Related to Cleft and Craniofacial Conditions
SIG 5

INTRODUCTION

These Perspectives (SIG 5) articles focus on the functional problems caused by the structural anomalies of the craniofacial complex and pathways for intervention. Articles describe the impact of submucous cleft palate, dental/skeletal anomalies, and distraction osteogenesis on speech and resonance outcomes for individuals with craniofacial anomalies. Multidisciplinary roles and best practice recommendations are also provided.

LEARNING OUTCOMES

You will be able to:
- define the physical and acoustic features of classic and occult submucous cleft palate
- identify the dental and occlusal anomalies that may cause obligatory articulation errors in patients with cleft lip and palate
- describe surgical management associated with distraction osteogenesis

CONTENTS

The Effect of Dental and Occlusal Anomalies on Articulation in Individuals With Cleft Lip and/or Cleft Palate by Kazlin N. Mason (https://doi.org/10.1044/2020_PERSP-20-00056)

PROGRAM HISTORY and IMPORTANT INFORMATION

Start date: November 20, 2020
End date: November 20, 2023

To earn continuing education credit, you must complete the learning assessment on or before November 20, 2023.
This course is offered for **0.30 ASHA CEUs** (Intermediate level, Professional area).
